AiReady

Security & Data Privacy for Your eLearning Ecosystem

Built for Trust, Transparency, and Enterprise-Grade Protection.

AIReady PracticeLayer integrates AI-powered learning experiences seamlessly into your existing LMS and authoring tools—without compromising your organization's data privacy or security.

This one-page summary highlights our security-first architecture, robust privacy safeguards, and commitment to transparency—the key assurances your IT, Legal, and Management teams need before implementation.

Why Organizations Trust AIReady PracticeLayer

Your Data Stays Yours

No AI Model Training: Your proprietary content is used only to generate responses for your organization. Neither AIReady nor our partners use your data to train or improve AI models.

Contractual Protection: In our default configuration, AI providers are bound by contract to not use your documents, prompts, or conversations for model training.

Nothing stored by default: Conversations aren't retained. Detailed logging is available but off unless you enable it.

Secure & Compliant Infrastructure

U.S.-Based Data Residency: All customer data, including documents, logs, and metadata, resides exclusively in the United States on secure AWS infrastructure.

Logical Data Partitioning: Each organization's data is logically isolated within our multi-tenant AWS environment (DynamoDB + S3), preventing cross-client access.

Multi-Layer Security Protection

Encryption: All data is encrypted in transit (TLS) and at rest (AES-256).

Secure Access Controls: Access to AIReady requires a unique, randomly-generated API key, ensuring only authorized applications can connect.

Multi-Domain Access Control: Configure a precise allow-list of authorized environments (e.g., your LMS, staging sites, and review tools). When configured, AIReady blocks any requests originating outside these approved domains, securing your API key against unauthorized use.

Full Control & Transparency

Configurable Logging: You decide what data is stored. By default, only minimal usage data is kept for billing; optional detailed logs can be enabled for analytics.

PII-minimizing by design: AIReady does not require names, emails, or LMS user records to function. When learner tracking is needed, we recommend pseudonymous identifiers rather than personal information.

Model Transparency: AIReady exclusively uses enterprise-grade models and always respects your model choices.
